

Hauck Ranch

2024 Private Treaty Offering Yearling Simmental & Sim-Angus Bulls

Hauck Ranch 7407 101 St. SE Forbes, ND 58439

Greetings Cattlemen

Welcome to our 7th annual private treaty bull sale. It's hard to believe this is already our 7th year of offering seedstock bulls to ranchers across North and South Dakota. Whether you are a returning customer or a new attendee, we welcome you and thank you for your interest in our breeding program.

2023 was another year filled with challenges. The extreme snow and cold coupled with a late winter led to another difficult April. Nonetheless, we were blessed with timely rains and wonderful grain and hay crops. The nation's cowherd numbers are down for another year and calf prices are optimistically higher. It's a good time to be in the cattle business! Genetics bought today will impact your cowherd for the next 15 + years. By focusing on industry relevant traits today, these cattle will propel your herd forward tomorrow.

Once again, we feel there is a good mix of bulls in the offering. This year, we had a higher number of our registered cows produce bulls, so the culling process was more extensive than normal. However, we are confident in the quality of our genetics and frankly put, we will not sell bulls that we wouldn't be comfortable using on our own cows. Both performance bulls as well as heifer safe options are available. A note to remember is the bulls offered are April calves, thus their weaning weights will be lower. We encourage you to look at the EPD's and adjusted weaning weights as these paint a more accurate picture of our offering. All black bulls are homo-black and homo-polled, unless otherwise listed.

If you have any other questions or would like to view the bulls in person, please don't hesitate to contact us. We look forward to visiting with you!

Could be the sleeper of the whole pick. Dam is a heifer so he came off the cow a little lighter but has quickly caught up. These epics are all flashy and attractively made.

Very complete bull that is a bit more maternal in his design. Lots of sweep and turn to his lower rib. Dam is a picture perfect cow with a wonderful udder.

Welcome To Our 7th Annual Private Treaty Offering!

Vaccination Protocol:

Our cattle are all managed on a complete herd health program recommended by Dr. Jim Bain of Frederick Vet Service. The bulls received 7-way at branding, and another 7-way shot, Pulmoguard, and ViraShield in September. At weaning, they also received Pulmoguard and ViraShield, and were poured with Ivermectin and injected with Cydectin.

Developing Cattle:

The calves are raised on grass and their mother's milk only. We do not creep feed our calves as we feel we can better identify the more growth oriented, higher performing lines. The bulls are being fed a TMR of ground corn, silage, prairie hay, alfalfa hay, distillers grain, and protein pellets as well as free choice mineral. They are developed slowly to ensure longevity and structural soundness. We strive to provide continued growth and weight gain after the bulls are turned out for breeding and throughout the fall and winter months.

Delivery:

We will semen test, pour the bulls again, and start delivering the bulls April 1st. Delivery is free within the first 200 miles. Delivery past 200 miles will be dependent on the load. We will work with you to deliver your bulls by the most economical means possible.

Terms and Conditions:

Terms of the sale are cash and all cattle become property of the buyer once the buyer takes possession of the bull. All cattle will be registered with the American Simmental Association and those papers will be transferred after purchase of the animal.

Breeding Philosophy:

Our breeding philosophy may differ from others. You won't find extreme EPD's or 900-plus pound weaning weights. Most cattle have more genetic potential for weaning weights than their environment allows for. Instead, we are focussing on commercially relevant traits to improve your bottom line. Fertility, longevity, structural correctness aren't the hype words you see on sale ads. However, cattle who settle first cycle, stay in the herd for 10-plus years, and don't break down help keep you in the black. The females behind these bulls are hardworking, maternal dams that do just that. This, along with breeding for top 30% in the traits helps to keep our herd balanced.

To our customers, neighbors, and friends: Thank You for all that you do every day and all year!
